

# Take Control of your Cloud Workplace Migrations

## ABOUT ALICETRIX :

Alicetrix offers Enterprise Workplace migration software through [Azure Marketplace](#), offering a powerful VM-based server environment for migrations of contents in a tenant-to-tenant scenario. Leading platforms such as Google Workspace, Box, and Microsoft 365 are supported.

### Mission statement

*"Because we felt enterprises needs a dedicated, secure, fast and one single solution for all their workplace migration needs."*

## WHAT WE OFFER

We offer a single one-stop solution and a simplified license pricing model for your entire workplace migration needs. Any customer with a desperate workplace environment can look to centralize their workplace contents in one single platform using our software.

Alicetrix Enterprise Workplace Migrator supports Cloud-based Tenant to Tenant migration helping migrate Emails, Calendars, Files, Messages from Exchange Online, OneDrive, SharePoint, Google, and multiple platforms.

One of our key differentiator is that your data is moved through your secured and own Azure tenant during migration. Additionally, security is enforced by using your security/App ID, which is not shared with anyone outside of your organization, hence offering security intrusion protection. This ensures full compliance with your requirements such as GDPR, HIPAA, PHI, etc. On top of that, you can utilize the full internet bandwidth of your server for migration, and a prioritized multi-threaded server environment ensures a faster migration with speeds reaching approx. 6 GB per hour for a single instance\*.

# Why Alicetrix AxW?

## Save your company money

Alicetrix Enterprise Workplace migrator is priced on a pay-as-you-go model for the customer not capped by either number of Users or the amount of data to be migrated. This ensures our customers get maximum flexibility, budget-saving. You only pay when you migrate or VMs can be removed easily from your infrastructure.

## Migrate quickly and flexibly

Alicetrix Enterprise Workplace Migrator has processes and tools for enabling a successful migration. It offers pre and post-migration reports that can help users plan the migration appropriately as well as validate, once the migration has been completed. It also provides intuitive dashboard capability during migration, that can be accessed through any device.

## Rich Features

Alicetrix Enterprise Workplace migrator allows for rich migration capability ensuring zero data is left behind. A complex migration approach example Cutover or Staged Migration can be implemented. Additionally, it also allows for Calendar and Permission migrations. Software is built to migrate for multiple days with auto-failover and multi-thread algorithms.

## Secured data migration

Get peace of mind knowing your software is running in your infrastructure and is not leaving your network boundary. Get a go-ahead with your InfoSec/Security team by ensuring that you are not sharing your app information or giving access to any third-party apps in your environment for migration purposes.

## Multiple Case Studies and Use cases

Alicetrix is helping our customers migrate in multiple scenarios, i.e. from one cloud platform to another, acquisition, divestment, and other complex scenarios thereby generating huge end-user satisfaction.
